

Repros Therapeutics (RPRX - \$ 15.27)

1Q14 – Uneventful Quarterly Financial Reporting.

This morning RPRX reported 1Q14 financial results with net losses of (\$8.5MM) or (\$0.37)/share. The company ended 1Q14 with \$68MM cash and potentially supports its operation deep into 2016, in our opinion.

- With a healthy balance sheet, the near-term financial performance is not the key investment focus of RPRX shares. The value drivers for investors in 2014, in our view, remain the advancements of various clinical developments, mainly the Androxal in secondary hypogonadism and to much less extend, the Proellex in uterine fibroids (UF) and endometriosis development.
- The 304/305 studies recently have employed a new co-primary endpoint for demonstration of superiority of Androxal over AndroGel in the 1) proportion of subjects whose semen concentrations are below 10×10^6 /mL; and 2) percentage change from baseline in semen concentration. We reiterate our positive outlook for successful 304/305 study based on prior studies that have consistently demonstrated the disparity of sperm impact between Androxal and TRTs. Top-line results and NDA filing are anticipated in mid- (Oct.) and late 4Q14, respectively.
- Given that the majority of current RPRX share value is on Androxal development, we view substantial upside of Proellex clinical progression has not been accounted for at the current valuation. Proellex in endometriosis Phase II study is underway and we anticipate top-line results possibly in 2H15. RPRX is scheduled to start a low dose Proellex in UF Phase II study (n=75) in mid-2014 with top-line data possible in 2H15. Given a completed vaginally-delivered Proellex (Proellex-V) in UF Phase II study (ZPV-200) already exhibited a robust outcome, RPRX could potentially move either the low dose oral or the vaginally-Proellex in UF program forward if the oral data is also encouraging.
- **Action.** We are reiterating our Buy rating and our \$32 target price to reflect the continued improved outlook of Androxal and the maturation of Proellex development. Our valuation is based on our P/E, and NPV-driven-and-probability adjusted sum-of-the-parts analyses.

Major risks

Clinical risks of trial study failure could have significantly negative impact on RPRX share value. Given that Androxal in secondary hypogonadism is the most advanced and most promising program in Repros' product portfolio, we believe the majority of RPRX share valuation (both assessed by us and the Street) resides in the potential clinical and regulatory success of this program. Despite a lower probability of clinical failure, in our opinion, a scenario that if the FDA requests significantly more difficult Phase III studies at the upcoming meeting and the company cannot accomplish such a task; could significantly reduce RPRX share value. As such, we view the outcome from the FDA discussion and report of the top-line results from the pivotal comparative trials (possibly in 4Q14) could be important binary events for RPRX shares.

Market potential of Androxal in secondary hypogonadism is lower than projected. With well-differentiated attributes, such as retaining spermatogenesis compared to marketed testosterone replacement products, coupled with the trend of increased prescription, and substantial unmet medical need; we believe the commercial outlook of Androxal could be substantial. However, given Androxal is a non-testosterone and competes in an environment of a well-entrenched TRT treatment paradigm, substantial and effective education efforts, in our opinion, are necessary to change physicians' prescribing habits and expand Androxal sales. The potential patent expiration of AndroGel could be an opportunity for Androxal but it also could become a challenge that limits Androxal's pricing flexibility. Overall, if our projection for the future market dynamics is incorrect, or the execution by the company (given the current management team has limited product commercialization experience), or potential licensing partner is inadequate; the revenue outlook for Androxal could disappoint.

Androxal patent dispute could potentially affect the economics RPRX receives. The company is currently in a legal dispute with Dr. Harry Fisch, who claims the two patents encompassing clomid as a treatment for hypogonadism. Despite the fact that the U.S. Patent and Trademark Office (PTO) recently reversed the rejections of Dr. Fisch's patent infringement claims, it might be too early or too uncertain, in our opinion, to determine the ultimate resolution. If such patents are not invalidated by the PTO or a court of competent jurisdiction, the company may be required to obtain a license, potentially for a fee, from the holder of such patents in order to develop Androxal further. Although we do not anticipate such a scenario would derail the development or commercial outlook of Androxal, we believe the economic reward to the company would be reduced modestly.

Although promising, low dose Proellex and Proellex-V must still demonstrate proof-of-concept results. Although the current clinical data regarding efficacy and safety from the low-dose oral Proellex and newly-

developed Proellex-V study are encouraging, it is still be too early to fully project the product's future in endometriosis and in uterine fibroids. In addition, it is still uncertain as which format of Proellex would be used for UF development going forward. Further, low dose oral Proellex in endometriosis Phase II study is still ongoing and we believe a positive efficacy and satisfactory safety profile are needed from the study to potentially to fully lift the clinical hold by the FDA to advance the program. Any negative outcomes could also a setback despite Proellex only accounts for a minor portion of the RPRX valuation.

Potential financing could dilute shareholders. Although we estimate that the company's cash position could support operations, including R&D and M&S expenses, into 2016; the possibility exists that additional cash could be needed for other unexpected corporate development activities. If not from the non-dilutive sources, options could include a potentially-dilutive equity offering, of which could potentially affect current shareholders negatively due to dilution. However, we view such risk could be offset by the substantial value increase of the company's assets due to clinical advancement leading to commercialization.

DISCLOSURES:

ANALYST CERTIFICATION

The analyst responsible for the content of this report hereby certifies that the views expressed regarding the company or companies and their securities accurately represent his personal views and that no direct or indirect compensation is to be received by the analyst for any specific recommendation or views contained in this report. Neither the author of this report nor any member of his immediate family or household maintains a position in the securities mentioned in this report.

EQUITY DISCLOSURES

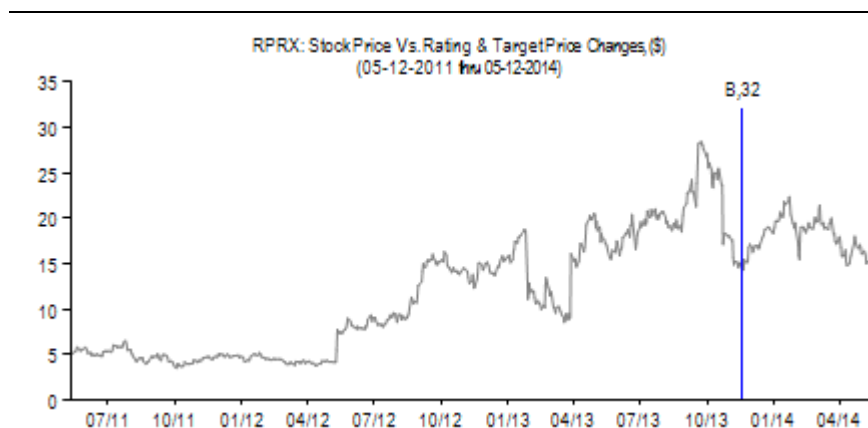

For the purpose of ratings distributions, regulatory rules require the firm to assign ratings to one of three rating categories (i.e. Strong Buy/Buy-Overweight, Hold, or Underweight/Sell) regardless of a firm's own rating categories. Although the firm's ratings of Buy/Overweight, Hold, or Underweight/Sell most closely correspond to Buy, Hold and Sell, respectively, the meanings are not the same because our ratings are determined on a relative basis against the analyst sector universe of stocks. An analyst's coverage sector is comprised of companies that are engaged in similar business or share similar operating characteristics as the subject company. The analysis sector universe is a sub-sector to the analyst's coverage sector, and is compiled to assist the analyst in determining relative valuations of subject companies. The composition of an analyst's sector universe is subject to change over time as various factors, including changing market conditions occur. Accordingly, the rating assigned to a particular stock represents solely the analyst's view of how that stock will perform over the next 12-months relative to the analyst's sector universe.
